Application No.:	10/665,903
Inventor:	Steven P. Trainoff
Title:	Method for correcting the effects of interdetector band broadening
Date of filing:	September 18, 2003
Assignee:	Wyatt Technology Corporation P. O. Box 3003 Santa Barbara, CA 93130-3003
Registered Agent:	Philip J. Wyatt, Reg. No. 32,449
Attorney Docket No.:	WTC 0303
Examiner:	Juan Carlos Ochoa
Group Art Unit:	2123

Applicant acknowledges Examiner Ochoa's communication of July 27, 2007.

Telephone interview

A telephone interview with Examiner Ochoa on July 12, 2007 is acknowledged. Certain clarifications of the claims were required to make the application allowable. The Examiner made several comments and recommendations to achieve this end. Presented herewith are the Applicant's corrections to the specification and claims that respond to the Examiner's remaining objections.

We note, also, that the specification contained some typographical errors. Specifically, the symbol *n* was used inadvertently in two contexts. While it was always clear from context which meaning of *n* was implied, we feel that using the symbol *l* as the number of parameters in the broadening function will improve clarity. No change to the intent or meaning will result. Accordingly, attached herewith are the paragraphs, with corrections shown, that address these errors.
